

Changes made to Temporary Concrete Washout Facility standard after the 6/12/08 conference call:

- Photo – Used original photo but altered the sign to remove company name. Still looking for a better photo.
- Criteria #6 – Revised to discuss evaporation from low volume facilities and not allow discharge into environment.
- Criteria #7 – Revised to discuss use of vac truck for high volume facilities and not allow discharge into environment.
- Temp Facilities #2 – Added the following: Entrench bales, bales butted together, size of wooden stakes, barrier walls butted together.
- Considerations 5th Paragraph – This was added to discuss the possibility of failures with larger above grade units.
- Considerations 6th Paragraph – This was added to discuss what to do in areas with high water tables.
- Details – Have been updated.
